A PERIODIC TABLE OF VISUALIZATION METHODS

>☀< C continuum		Data Visualization Visual representations of quantitative data in schematic form (either with or without axes) Information Visualization The use of interactive visual representations of data to amplify cognition. This means that the data is transformed into an image, it is mapped to screen space. The image can be changed by users as they proceed working with it Concept Visualization Methods to elaborate (mostly) qualitative concepts, ideas, plans, and analyses.										Strategy Visualization The systematic use of complementary visual representations in the analysis, development, formulation, communication, and implementation of strategies in organizations. Metaphor Visualization Visual Metaphors position information graphically to organize and structure information. They also convey an insight about the represented information through the key characteristics of the metaphor that is employed Compound Visualization The complementary use of different graphic representation formats in one single schema or frame										☀ G graphic facilitation

re·port·er, noun. 1. a stack of maps, charts and other diagrams that summarize and retell a breaking-news event in chronological order.

MASACRE EN ORLANDO

Masacre en Orlando: reconstrucción gráfica del ataque

Omar Mateen, un ciudadano estadounidense de 29 años, asesinó el domingo de madrugada a 49 personas en un conocido club gay de Orlando. Se atrincheró en la discoteca con un grupo de rehenes. Tres horas después fue abatido por las fuerzas de asalto.

Por: Mariano Zafra, A. Verde, Javier Figueroa y Luis Melgar

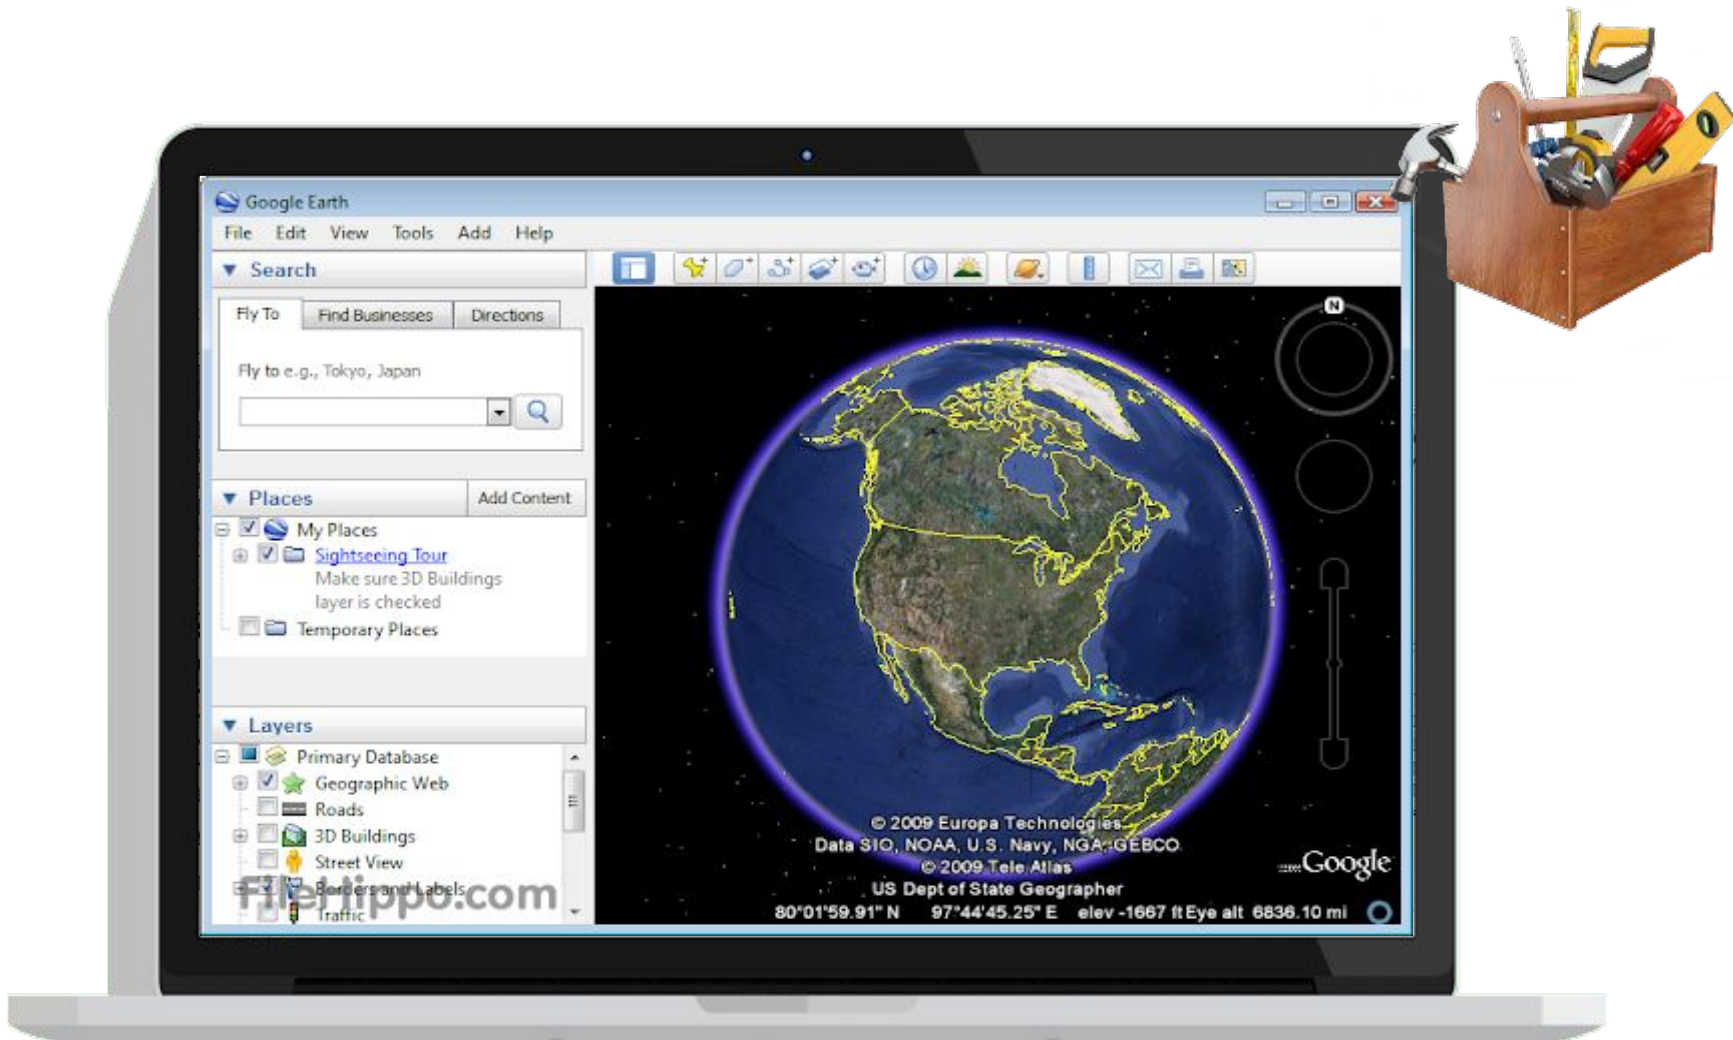

Actualizado: 13 jun | 6:30 pm

Cronología del ataque

El asaltante, Omar Mateen, un ciudadano norteamericano de 29 años, conduce 120 millas desde la ciudad en la que vivía, Fort Pierce, hasta Orlando.

So You Want to Build A Scroller

Created: 06 April 2015

A critical component of successful interactive visualizations is orienting the users to what they are looking at. In a multi-faceted data story, it can be useful to explicitly move a user through the different views of the data.

Previously, we've [looked at stoppers](#) as a way to implement this guidance system.

Here, I'd like to look at how the simple act of scrolling can be harnessed to direct a user through a complex visualization combined intuitively with a guiding narration.

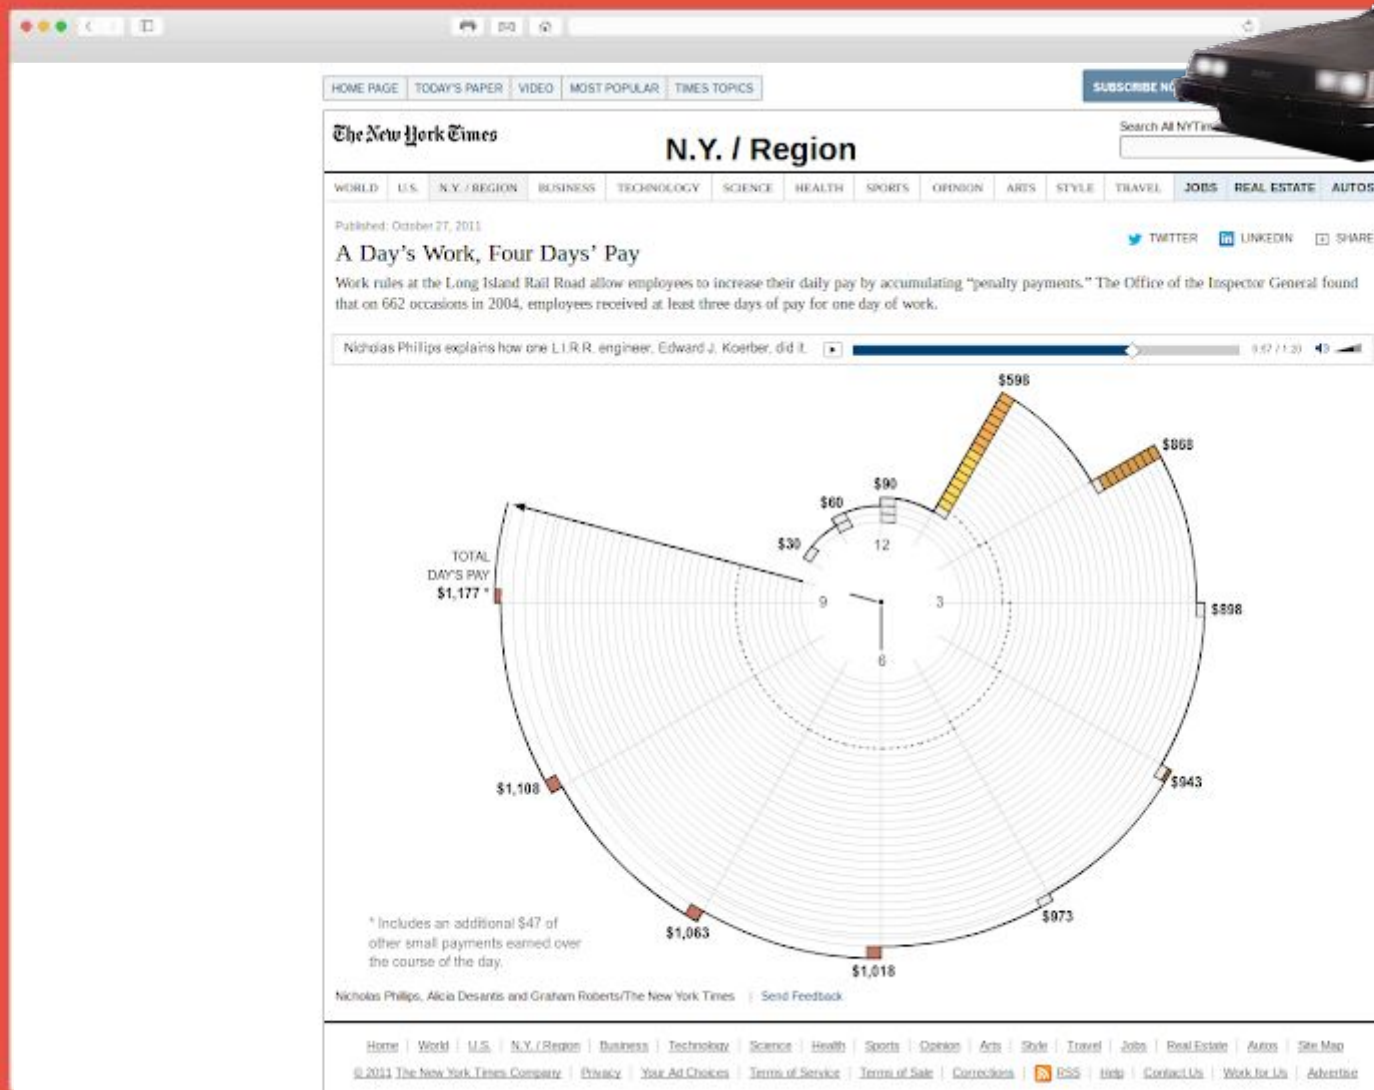

Data Scrolling

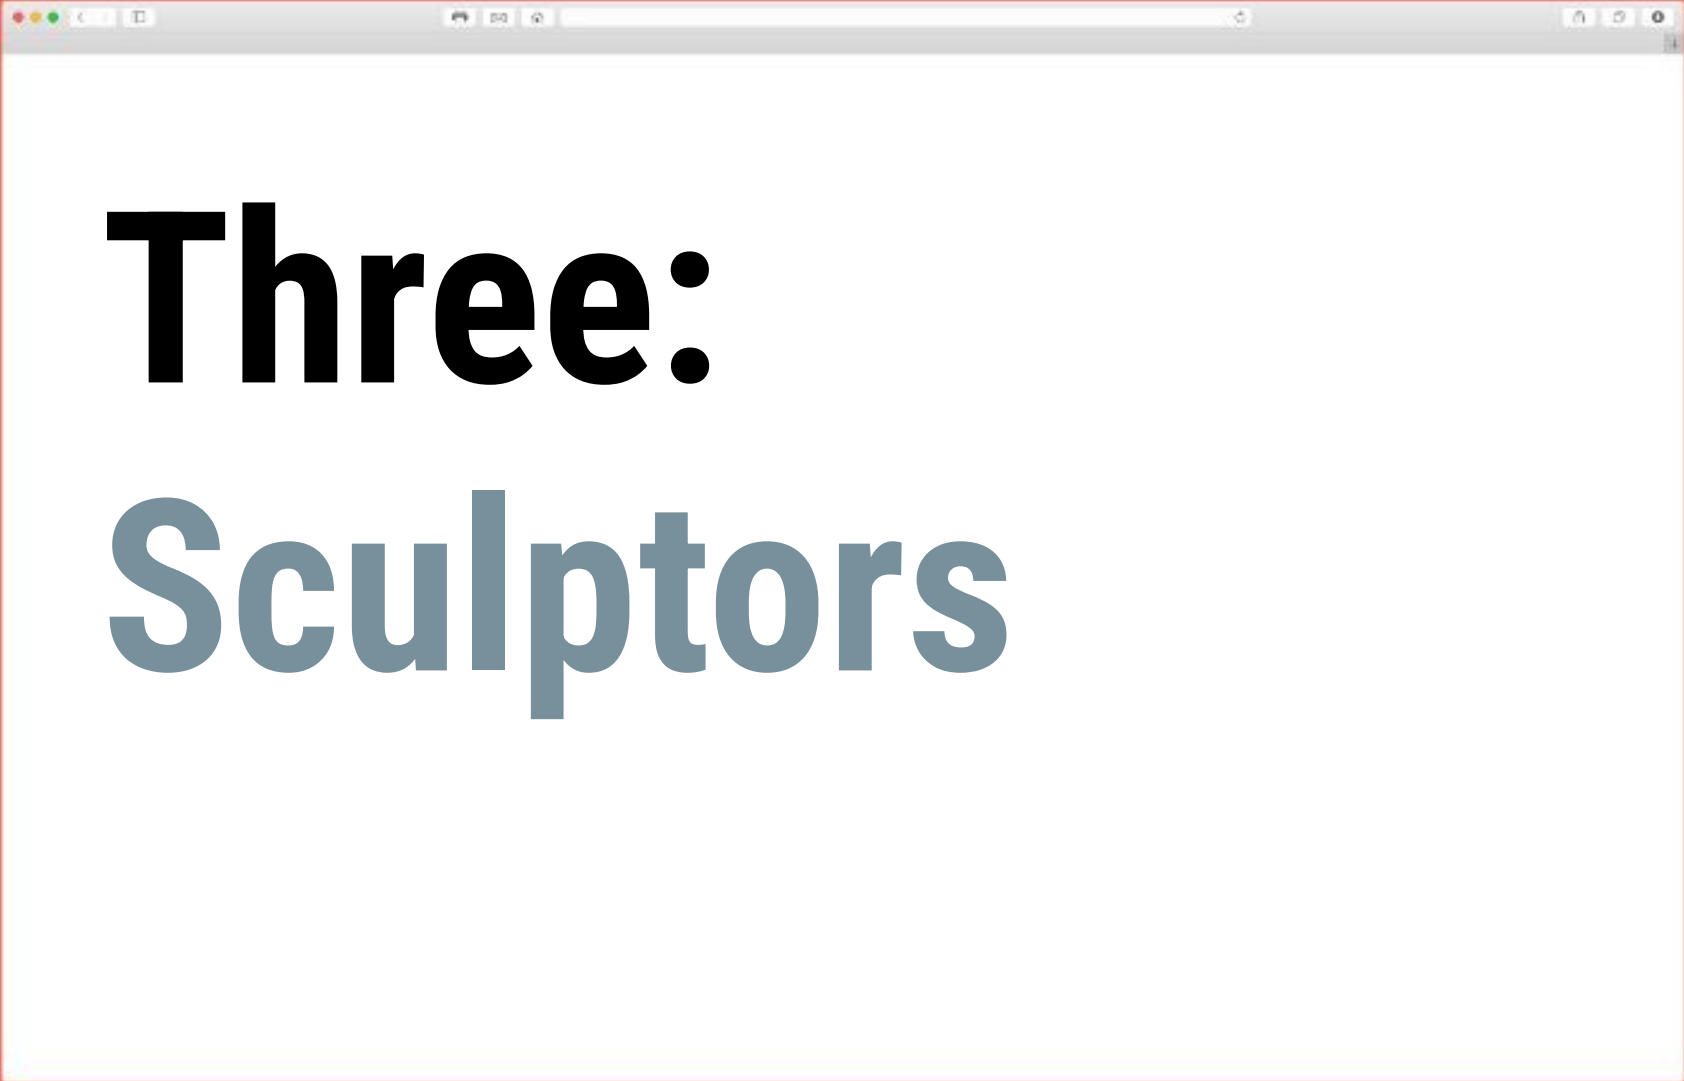

There have been many interesting uses of scrolling in data visualization and interactive storytelling (which I will talk a lot more about in my [upcoming presentation](#)). In fact, Mike Bostock recently published a wonderful set of best practices on [How To Scroll](#) to maximize the use of this tool.

For this tutorial we will look at some of the implementation details for scrolling in data visualizations. I'll focus on a common pattern that moves the user through discrete sections of content, while modifying the visualizations accompanying the text to create a unified data driven story.

This technique has been used in many places including the New York Times with [Gregor Aisch's The Clubs That Connect The World Cup](#):

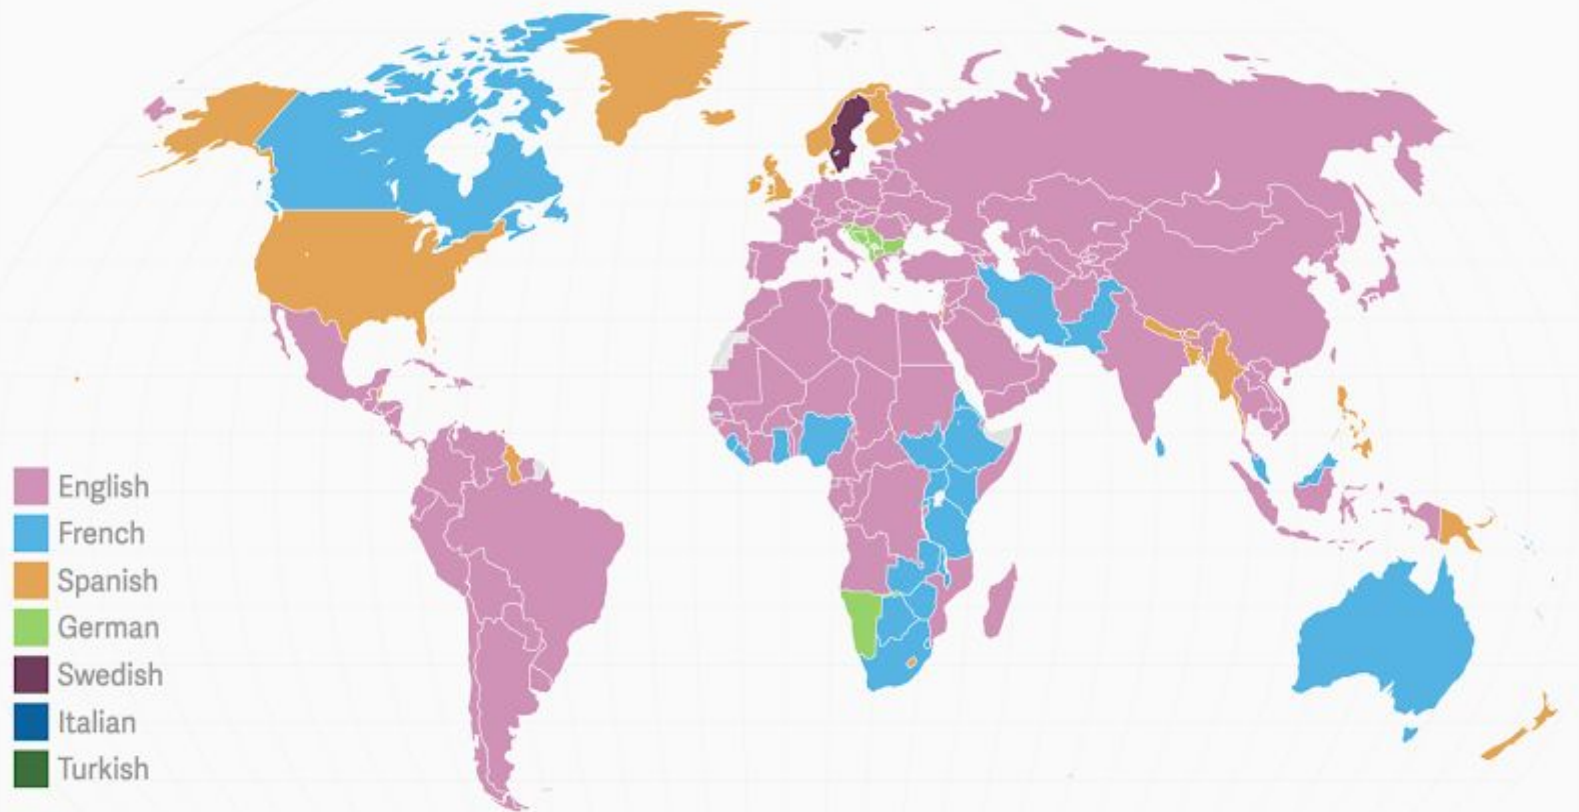

A browser window with a red background. The window has a white title bar with standard macOS window controls (red, yellow, green buttons) on the left and a search bar on the right. The main content area is white and contains the text 'Three: Sculptors'.

Future of United States is education, not football

I am an alumnus of CSU (Colorado A&M, 1954, B.S.) who is adamantly opposed to building a new football stadium.

In this era of transparency, why haven't the donors of this enormous sum of money been identified and what have they been promised in exchange for this donation? It is a completely irresponsible proposal.

I majored in entomology when I attended Colorado A&M, receiving an excellent background for my career in agriculture and entomology and to pursue advanced degrees from other universities. The entomology department no longer exists at CSU. I also played tennis for A&M, but the men's tennis team no longer exists. The proposal to waste millions of dollars (and a large amount of land) to build an on-campus stadium qualifies as a "boondoggle" as described by Dr. David Ridpath (Coloradoan, April 14, 2012). I worked 35 years in 10 states and 10 countries and have never once been asked what the football team was doing with the university's money.

Legalizing marijuana not good for us

Please carefully consider the proposed Colorado constitutional Amendment 64 and Fort Collins marijuana ballot Question 301 that we will vote on in November. Since the amendment doesn't mandate taxing marijuana sales, there is no guarantee there will be any money at all. Banks will not accept the drug money, which
