Escape from Google Maps

Google Maps is no longer free. New usage limits will charge users who draw a lot of traffic. If you draw a lot of traffic, you probably have to pay.

Four options

1. Stay below the limits

Stay under 25,000 hits/day, or only use for one-offs that spike and fade.

2. Pay Google

It will cost lots of money. Could be six figures.

3. Create a copycat

This is work. But new open-source tools make it easier.

4. Use HTML5 alternatives

Many maps don't need tiles. A simple HTML5 map is often superior.

A copycat needs three things...

a data source, like
OpenStreetMap

a tile set, like
you can make
with TileMill

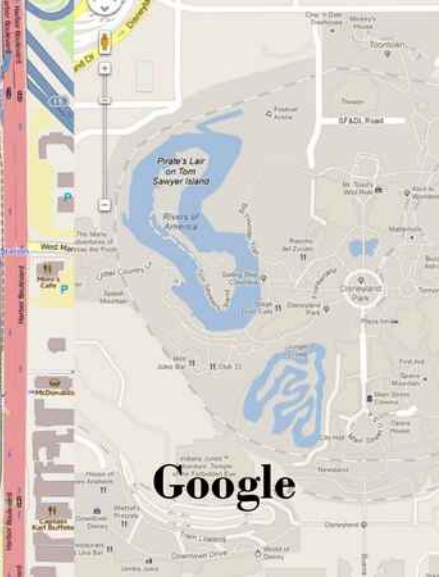

a JavaScript
interface, like
Leaflet

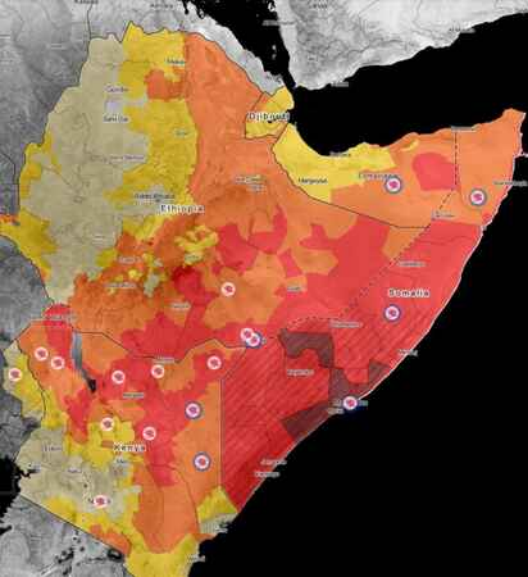

OSM

Google

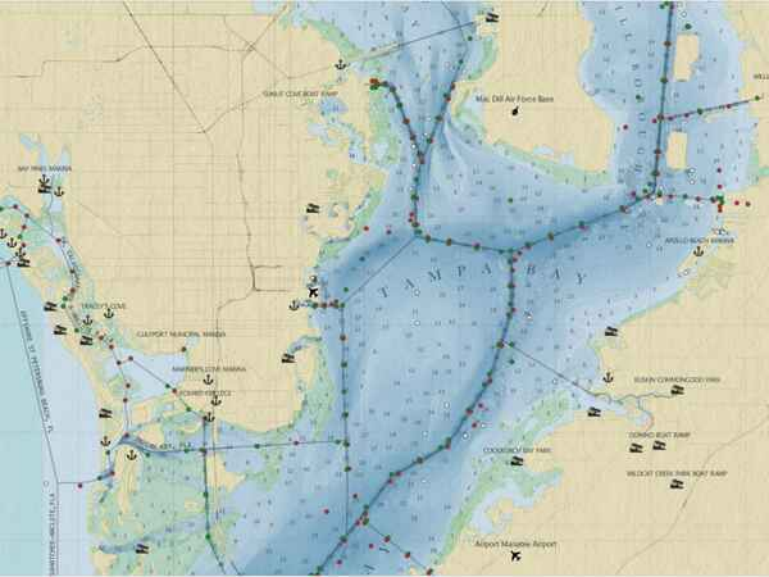

Battling Hunger in the Horn of Africa

with the World Food Programme

We launched horn.wfp.org, visualizing the massive impact of the humanitarian crisis and highlighting critical operation locations in the Horn of Africa. The site makes it easier to understand and communicate the complex situation around the famine and encourages visitors to share the information and donate to relief efforts.

- ▶ WFP Distribution Centers
- ▶ Describing the situation in detail
- ▶ Sharing and embedding

An HTML5 alternative needs two things...

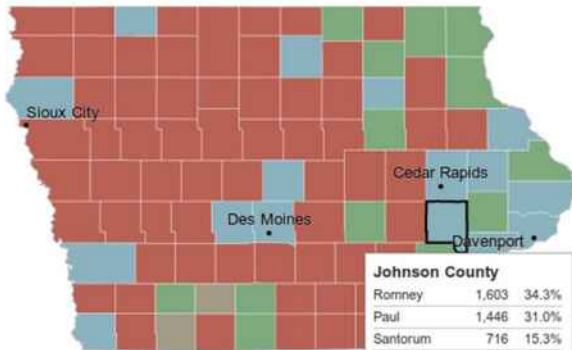

a way to convert data to
HTML5 formats

an HTML5 interface, like
Raphael

As the official start to the presidential election race, Iowa holds a unique position in American politics but the quirks of its caucus system make the process unpredictable, not to mention impenetrable. Rather than voting on a conventional ballot, Iowans gather in person at 1,774 local precinct meetings where they listen to speeches on behalf of the candidates and then cast their vote.

Results in context

Romney may have been the official winner, but Rick Santorum's extraordinary performance in the state gave a rocket-boost to his campaign. Romney's failure to clinch the state in a more convincing manner meant the door to become the credible Conservative alternative remained wide open. Santorum's humiliating last place almost caused him to pull out of the

Errant NATO Airstrikes in Libya: 13 Cases

An on-the-ground examination by The New York Times of sites across Libya that were the targets of NATO airstrikes found evidence that the air campaign was not as flawless as NATO has described. The Times found credible accounts of dozens of civilians killed in several distinct attacks, of an attack on rebels and an ambulance that NATO explicitly denied, and of structures that seem to have been hit by mistake. Before and after: The photos that show the complete devastation caused by the worst tornado to hit the U.S. in 64 years

By JOHN STEVENS and SEBASTIAN ALLAN

Last updated at 10:41 PM on 24th May 2011

[Comments \(49\)](#) [Share](#)

As the residents of devastated Joplin come to terms with the destruction caused by the deadliest tornado to hit the U.S. in 64 years, shocking photos show how much the storm has changed their city.

The images from before and after the deadly storm show how the working class city of around 50,000 people in Missouri was reduced to a disaster zone in a matter of minutes.

More...

- [Path of the tornado: Astonishing new aerial images reveal how twister cut a six-mile swath of destruction through Missouri town](#)

When it struck around dinner time Sunday night, the funnel cloud cut a path nearly six miles long and up to a mile wide.

Some 2,000 houses and many other businesses, schools and other buildings were destroyed.

'Pretty much everybody in town knows somebody they've lost,' Missouri governor Jay Nixon said.

It is the latest in a string of powerful storms this spring that have killed more than 300 people and caused more than \$2 billion in property damage across the United States.

Joplin's tornado is thought to have caused insured losses of between \$1 billion and \$3 billion.

Tragic Before And After Pictures Of Joplin, Missouri

Leah Goldman | May 26, 2011, 5:10 PM | 60,176 | 3

[Email](#)

At least 123 people have been killed in the devastating tornado that hit Joplin, Missouri on Sunday. And still, 232 people are missing.

The tornado was the deadliest in the U.S. since 1947.

More than 2,000 buildings have been completely destroyed, and another 5,000 to 10,000 have severe damage.

Photographer Aaron Fuhman put together a series of before and after pictures that really show the devastation.

Occupy L.A., before and after

✉ Comments 161 Share 426 +1 2 Tweet 17 Recommend 41

Early Wednesday morning, LAPD officers took action to remove Occupy L.A. protesters from the lawn around City Hall. These panoramic photos taken from the same spot nearly a month apart, contrast the scene of a fully occupied encampment and the debris left behind after the police swept through, arresting almost 300 people. The panoramas were created by combining consecutive photos.

Redistricting plan would widen Albany's partisan divide

Posted on February 13, 2012 by Sasha Chevkin and Michael Keller

THE NEW YORK **World** The Partisan Impact of Redistricting

If the 2010 New York State legislative races took place under the district lines proposed by the state redistricting task force, the controlling parties in both chambers would increase their majorities, analysis by the New York World and the [Center for Urban Research](#) has shown. Senate Republicans would see their current one-seat majority widen to 34-29. Assembly Democrats would gain four seats, increasing their current 98 seats to 102 in the 150-member chamber. Use the address finder to see how your district would be affected. [Expand Map.](#)

Voter registration advantage

This map, the Florida House's plan for Congressional districts, has passed the House as HB 6005.

The House's buffet-menu of potential congressional and redistricting options would appear to increase minority-representation and draw more block-shaped districts tracking with existing city and county lines.

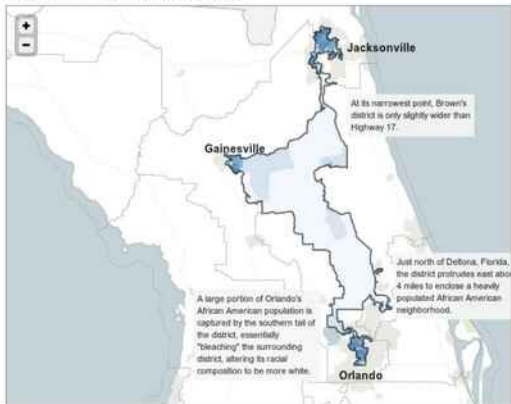

Read Aaron Deslatti's [detailed analysis](#) for more information.

— Aaron Deslatti

Graphic by Wes Meltzer

Packing: When faced with too many unfriendly voters, it can also be a winning strategy to limit the damage by drawing them all into one district. The benefit for you is there are fewer of the voters you don't want in all the surrounding districts. When race is involved, redistricting pros call it **bleaching**.

Voters in the packed district often lose out because no matter how large their influence in the district, they can only have sway with one representative. If the community members were spread over more districts, and had significant population in each, they could have the ear of multiple politicians.

Introducing myFault

myFault uses official maps of seismic hazards in California to identify the dangers your home, school or workplace could face during an earthquake.

Produced by California Watch, the Golden State's largest investigative reporting team, myFault is based on the same government data used to report our series on seismic hazards in public schools. The app shows how the places you care about could be affected by landslide, liquefaction and fault rupture zones.

The app also includes an earthquake preparedness checklist for you and your family, based on recommendations by emergency responders, FEMA and the American Red Cross. We've also also included a flashlight (LED flash-enabled devices only) for use in emergencies.

Features include:

- + Unique seismic hazard map
- + Quake preparation checklist
- + Plus a flashlight (just in case)

Forecast for Plume's Path Is a Function of Wind and Weather

A forecast by the Comprehensive Nuclear Test Ban Treaty Organization shows how weather patterns this week might disperse radiation from a continuous

The forecast does not show actual levels of radiation, but it does allow the organization to estimate when different monitoring stations, tracked with small dots, might be able to detect extremely low levels of radiation. Health and nuclear experts emphasize that any plume will be diluted as it travels and, at worst, would have extremely minor health consequences in the United States.
