Many older L.A. buildings could collapse in an earthquake

By Rong-Gong Lin II and Rosanna Xia and Deng Smith

OCTOBER 12, 2013, 2:36 PM

More than 1,000 old concrete buildings in Los Angeles and hundreds more throughout the county may be at risk of collapsing in a major earthquake, according to a Times analysis.

By the most conservative estimate, as many as 50 of these buildings in the city alone would be destroyed, exposing thousands to injury or death.

A cross-section of the city lives and works in them: seamstresses in downtown factories, white-collar workers in Ventura Boulevard high-rises and condo dwellers on Millionaires' Mile in Westwood.

Despite their sturdy appearance, many older concrete buildings are vulnerable to the sideways movement of a major earthquake because they don't have enough steel reinforcing bars to hold columns in place.

In Case You Missed It

How a New Zealand earthquake led to
building reforms

Oct. 12, 2013

Los Angeles will have the nation's toughest earthquake safety rules

Larry Jones, U.S. Geological Survey seismologist, second from left, celebrates with City Atty. Mike Feuer, center, as Mayor Eric Garcetti signs sweeping legislation to require earthquake retrofits on 15,000 buildings in Los Angeles on Friday. (Los Angeles Times)

By [Rong-Gang Lin](#) in LA, [Rosanna Xia](#) and [Doug Smith](#) • Contact Reporters

OCTOBER 9, 2015, 5:35 PM

In a stark recognition of Los Angeles' vulnerability to a major earthquake, the city on Friday enacted the nation's most sweeping seismic regulations, requiring an estimated 15,000 buildings be retrofitted so they will better withstand violent shaking.

The unanimous vote by the Los Angeles City Council caps decades of efforts to strengthen two types of buildings that pose the most serious potential for loss of life in a big quake: Brittle concrete buildings that dot L.A.'s major boulevards and the boxy wood-frame apartment complexes built on top of carports. More than 65 people died when these types of buildings collapsed during quakes in 1971 and 1994.

The action marked a political and psychological milestone for a city that is at the center of earthquake country yet has a tradition of keeping those dangers out of mind.

What Exxon knew about the Earth's melting Arctic

By SARA HERVING, KATIE JENNINGS, MASAKO MELISSA HIRASHI AND SUSANNE RUST

OCT. 9, 2015

Back in 1990, as the debate over climate change was heating up, a dissident shareholder petitioned the board of Exxon, one of the world's largest oil companies, imploring it to develop a plan to reduce carbon dioxide emissions from its production plants and facilities.

The board's response: Exxon had studied the science of global warming and concluded it was too murky to warrant action. The company's "examination of the issue supports the conclusions that the facts today and the projection of future effects are very unclear."

Memento for WordPress x

pastpages.github.io/wordpress-memento-plugin/

Memento for WordPress

A Wordpress plugin to enable the Memento framework for time-based access

Latest release: 0.0.1-beta

Download ZIP Download TAR View On GitHub

What is Memento?

Memento is a HTTP-based framework that "bridges the past and present web." Sites that support it – like the Internet Archive and the Library of Congress – accept time-based web requests and return past versions of archived URLs.

What does this plugin do?

Rather than rely on patchy third-party services for preservation, sites with this plugin installed instantly become their own living, digital archive.

Past revisions of posts, inaccessible to users of a typical Wordpress site, are indexed and available for review.

How do I try it?

Download the source code from the links on this page and install it manually on your Wordpress site using [the recommended method](#).

This software is a beta release and in active development. Please report issues, share your thoughts and contribute code patches via its [repository on GitHub](#).

Who made it?

REYNOLDS JOURNALISM INSTITUTE
Missouri School of Journalism • University of Missouri

This plugin was developed by Ben Welsh, [PastPages.org](#) and the [Reynolds Journalism Institute](#) at the Missouri School of Journalism.
